Project Title	Personal Expense Tracker

Sprint 4

- Display And Logout

- Display And Logout :

The screenshot shows the Spyder Python IDE interface. The main editor displays the code for the 'display' and 'logout' routes. The 'display' route (lines 175-190) prints the session username and ID, prepares a SQL statement to select user details, binds the session ID, executes the query, fetches the account details, and prints them. It also prepares a SQL statement to select credit details for the same user, executes it, and prints the results. The 'logout' route (lines 195-205) clears the session data (logged in status, ID, and username) and renders the 'home.html' template. The application is run on host '0.0.0.0' with port 5000.

```
175 @app.route('/display')
176 def display():
177     print(session['username'], session['id'])
178     stmt = ibm_db.prepare(conn, "select * from user where id = ?")
179     ibm_db.bind_param(stmt, 1, session['id'])
180     ibm_db.execute(stmt)
181     account = ibm_db.fetch_tuple(stmt)
182     print("accountdisplay", account)
183     stmt1 = ibm_db.prepare(conn, "select * from credit where userid = ?")
184     ibm_db.bind_param(stmt1, 1, session['id'])
185     ibm_db.execute(stmt1)
186     acct = ibm_db.fetch_tuple(stmt1)
187     print(acct)
188     return render_template('display.html', account = account, acct = acct)
189
190 @app.route('/Logout')
191 def logout():
192     session.pop('Loggedin', None)
193     session.pop('id', None)
194     session.pop('username', None)
195     return render_template('home.html')
196
197 if __name__ == '__main__':
198     app.run(host='0.0.0.0', debug = True, port = 5000)
```
